

Index to Communications of the ACM

VOLUME 12 • 1969

The Index is presented in three sections:

- I. Bibliography
- II. Author Index
- III. Department Index

ENTRIES are included for technical papers, reports and articles that appear in the Contents listings of the twelve issues of the year, plus letters to the editor of technical content. Algorithms are indexed separately in the Algorithms department; the 1969 index appears on page 693 of this December issue.

THE REFERENCE NUMBER for each entry is a key to the year, volume, issue, and page number of the item.

THE AUTHOR INDEX gives authors' names listed singly. For papers by multiple authors, each author's name appears in alphabetical order. Thus the fact that an author's name is followed by the title of an article does not mean that he is necessarily the only author of that article; he may be one of two or more authors.

IN THE DEPARTMENT INDEX the year's contents are arranged under the following headings: *Communications* technical departments (in alphabetical order); special reports; and letters to the editor (of technical content only).

Key. The first column, A1, B1, C1, is the key to the classification system categories; second column: number of the algorithm if in CACM; third column: algorithm title; fourth column: month, year, pages (in parentheses) in CACM or reference elsewhere. This 1969 index is the first supplement to the Index by Subject to Algorithms, 1960-1968 (*Comm. ACM* 11, 12 (Dec. 1968), 827-830).
